What Is Claimed Is:

- 1. A method for diagnosing, or identifying a predisposition to the development of, a macular degeneration-related disorder in a subject, comprising detecting in a biological sample from the subject the presence or abnormal levels of an autoantibody against, or an immune complex containing, at least one macular degeneration-associated molecule.
- 2. The method of claim 1, wherein said macular degeneration-associated molecule is selected from the group consisting of fibulin-3, vitronectin, β crystallin A2, β crystallin A3, β crystallin A4, β crystallin S, glucose-regulated protein 78 kD (GRP-78), calreticulin, 14-3-3 protein epsilon, complement 1q binding protein/hyaluronic acid binding protein, serotransferrin, albumin, keratin, pyruvate carboxylase, and villin 2.
- 3. The method of claim 1, wherein the detecting comprises contacting the biological sample with said at least one macular degeneration-associated molecule or an antigenic fragment thereof, and detecting a specific interaction between the autoantibody and the at least one macular degeneration-associated molecule or an antigenic fragment thereof.
- 4. The method of claim 1, wherein the detecting comprises precipitating the immune complex from the biological sample.
- 5. The method of claim 1, further comprising detecting a level of the autoantibody or immune complex in a control subject and comparing levels of the autoantibody or immune complex in the subject and the control subject.
- 6. The method of claim 1, wherein said biological sample is a urine, eye fluid, blood plasma, serum, whole blood, or lymph fluid from the subject.
- 7. The method of claim 3, further comprising the step of precipitating a complex formed between the autoantibody and the at least one macular degeneration-associated molecule or an antigenic fragment thereof before the detecting step.
- 8. The method of claim 3, further comprising the step of contacting the biological sample with a labeled antibody that competes with the autoantibody to form complexes with the at

least one macular degeneration-associated molecule or an antigenic fragment thereof.

- 9. The method of claim 8, wherein the at least one macular degeneration-associated molecule or an antigenic fragment thereof is bound to a solid phase and the method further comprises the step of removing the solid phase from the serum sample to separate the complexes from unbound, labeled antibody.
- 10. The method of claim 1, wherein the macular degeneration-related disorder is Malattia Leventinese.
- 11. The method of claim 10, wherein said at least one macular degeneration-associated molecule is selected from the group consisting of fibulin 3, β crystallin A2, β crystallin A3, β crystallin A4, β crystallin S, glucose-regulated protein 78 kD (GRP-78), calreticulin, complement 1q binding protein/hyaluronic acid binding protein, 14-3-3 protein epsilon, serotransferrin, albumin, keratin, pyruvate carboxylase, and villin 2.
- 12. The method of claim 1, wherein the macular degeneration-related disorder is agerelated macular degeneration.
- 13. The method of claim 12, wherein said at least one macular degeneration-associated molecule is vitronectin, haptoglobin, or immunoglobulin light chain.
- 14. The method of claim 1, further comprising detecting at least one macular degeneration-associated genetic marker, drusen-associated phenotypic marker, or drusen-associated genotypic marker in the subject.
- 15. The method of claim 1, further comprising examining the subject with an ophthalmologic procedure.
- 16. The method of claim 1, wherein the macular degeneration-related disorder is Malattia Leventinese, and the method comprises detecting in a biological sample from the subject the presence or abnormal levels of at least one autoantibody, wherein said autoantibody specifically binds to fibulin 3, β crystallin A2, β crystallin A3, β crystallin A4, β crystallin S, glucose-regulated protein 78 kD (GRP-78), calreticulin, complement 1q binding protein,

hyaluronan-binding protein, 14-3-3 protein epsilon, serotransferrin, albumin, keratin, pyruvate carboxylase, or villin 2.

- 17. The method of claim 16, wherein said biological sample is a urine, eye fluid, blood plasma, serum, whole blood, or lymph fluid from the subject.
- 18. The method of claim 16, wherein the detecting comprises contacting the biological sample with said at least one macular degeneration-associated molecule or an antigenic fragment thereof, and detecting a specific interaction between the autoantibody and the at least one macular degeneration-associated molecule or an antigenic fragment thereof.
- 19. The method of claim 16, further comprising detecting at least one genetic marker associated with Malattia Leventinese.
- 20. The method of claim 1, wherein the macular degeneration-related disorder is agerelated macular degeneration, and the method comprises detecting in a biological sample from the subject the presence or an abnormal level of an autoantibody against vitronectin, choroid, Bruch's membrane, RPE, or a retina-associated protein.
- 21. The method of claim 20, wherein said biological sample is a urine, eye fluid, blood plasma, serum, lymph fluid, or whole blood from the subject.
- 22. The method of claim 20, wherein the detecting comprises contacting the biological sample with vitronectin or an antigenic fragment of vitronectin, and detecting a specific interaction between the autoantibody and vitronectin or a specific interaction between the autoantibody and the antigenic fragment of vitronectin.
- 23. The method of claim 20, further comprising detecting at least one genetic marker associated with age-related macular degeneration.
- 24. A method for treating a macular degeneration-related disorder in a subject, comprising inducing immune tolerance to at least one macular degeneration-associated molecule in the subject, wherein said macular degeneration-associated molecule is selected from the group consisting of fibulin 3, β crystallin A2, β crystallin A3, β crystallin A4, β crystallin S, glucose-

regulated protein 78 kD (GRP-78), calreticulin, complement 1q binding protein/hyaluronic acid binding protein, 14-3-3 protein epsilon, serotransferrin, albumin, keratin, pyruvate carboxylase, and villin 2.

- 25. The method of claim 24, wherein said immune tolerance is induced by administering to the subject a tolerogenic form of the macular degeneration-associated molecule.
- 26. The method of claim 24, wherein said disorder is age-related macular degeneration or Malattia Leventinese.
- 27. A method for identifying a gene that causes a macular degeneration-related disorder, comprising detecting an autoantibody against, or an immune complex containing, an autoantigen that is encoded by the gene.
- 28. The method of claim 27, wherein said macular degeneration-related disorder is AMD.
- 29. A kit for diagnosing, or identifying a predisposition to the development of, a macular degeneration-related disorder in a subject, comprising at least one macular degeneration-associated molecule or an antigenic fragment thereof, a solid support, wherein said macular degeneration-associated molecule or said antigenic fragment thereof is bound to the solid support, and a binding molecule that is capable of specifically binding to a human antibody; wherein said macular degeneration-associated molecule selected from the group consisting of fibulin-3, vitronectin, β crystallin A2, β crystallin A3, β crystallin A4, β crystallin S, calreticulin, complement 1q binding protein/hyaluronic acid binding protein, 14-3-3 protein epsilon, serotransferrin, albumin, keratin, pyruvate carboxylase, and villin 2.
- 30. The kit of claim 29, wherein said binding molecule is conjugated to a detectable label.
- 31. The kit of claim 29, wherein said macular degeneration-related disorder is Malattia Leventinese, and said at least one macular degeneration-associated molecule is selected from the group consisting of fibulin 3, β crystallin A2, β crystallin A3, β crystallin A4, β crystallin S, glucose-regulated protein 78 kD (GRP-78), calreticulin, complement 1q binding protein/hyaluronic acid binding protein, 14-3-3 protein epsilon, serotransferrin, albumin, keratin, pyruvate carboxylase, and villin 2.

32. The kit of claim 29, wherein said macular degeneration-related disorder is age-related macular degeneration, and said at least one macular degeneration-associated molecule is vitronectin.
